

Twisteezwire® Braiding Wire

patent pending

Small, Narrow Hunter Braids page 1

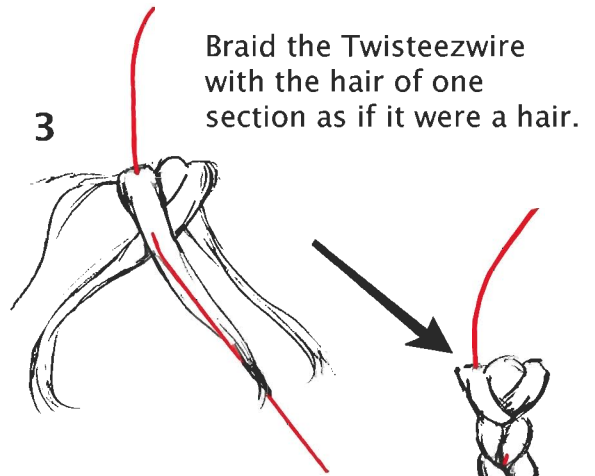

Using a sissors or nail clippers, cut a length of Twisteezwire six inches longer than your horse's mane.
If you do not wish to see the wire in the finished braid choose wire that is close in color to the horse's hair.

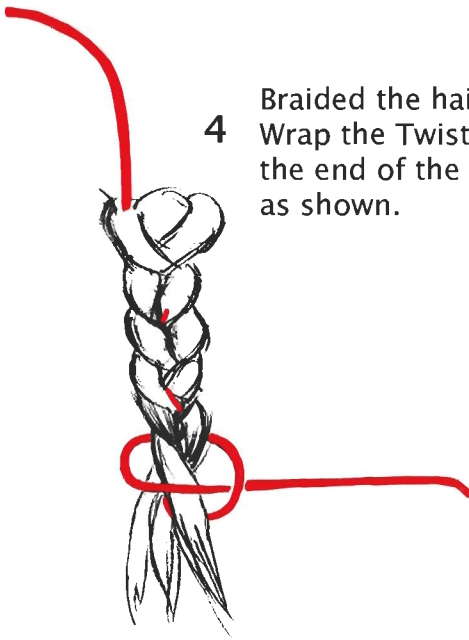

Divide the desired section of mane into three equal sections. Place the Twisteezwire into one of the sections so that 3" of wire sticks up above the horse's neck.

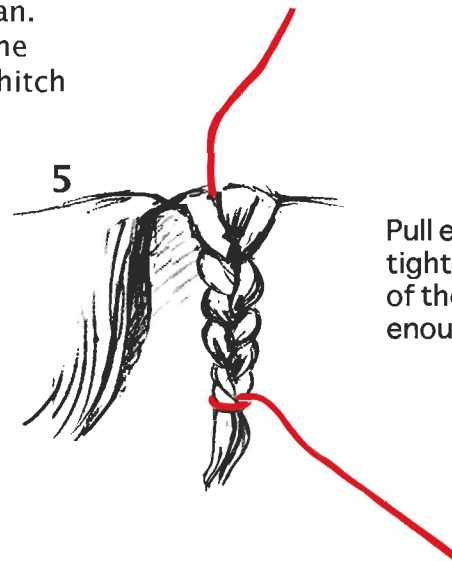

PATENT PENDING

Braid the Twisteezwire with the hair of one section as if it were a hair.

Braided the hair down as far as you can. Wrap the Twisteezwire once around the the end of the braid and make a half hitch as shown.

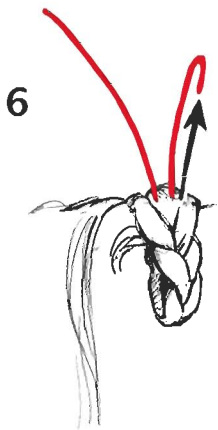

Pull end of the wire tight to secure the end of the braid. Pull just enough to make it tight.

Twisteez[®] Braiding Wire

6

Make a small hook shape with the end of the wire that secures the braid. Push this bent end through the base of the braid close to the horse's neck. You have created a braid loop.

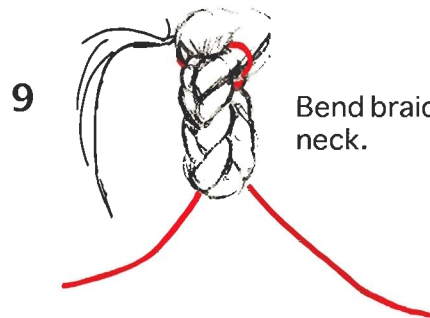

7

Position the braid loop straight up. It will stay in place.

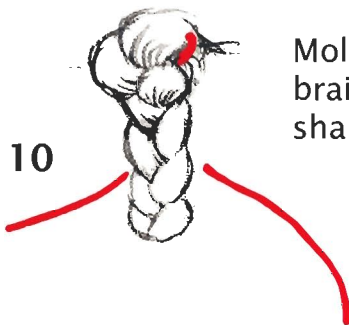

8

Cross the wires at the base of the braid and twist them tightly once.

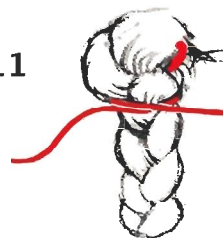

9

Bend braid back down on horse's neck.

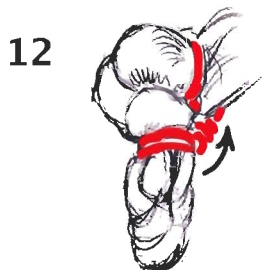

10

Mold the top of the braid into a button shape.

11

Cross wires tightly under the button top .

12

Wrap the wires behind the braid and twist tightly three or four times. Cut wire 1/4 inch beyond the twist. Fold extra wire up and under.

Finished Hunter Braid.
